

Package ‘fitCTVARMx’

July 26, 2024

Title Fit the Continuous-Time Vector Autoregressive Model

Version 0.0.0.9000

Description Fit the continuous-time vector autoregressive model using the 'OpenMx' package.

coef.fitctvaridmx	Parameter Estimates
-------------------	---------------------

Description

Parameter Estimates

Usage

```
## S3 method for class 'fitctvaridmx'  
coef(object, iota = FALSE, sigma = FALSE, theta = FALSE, ...)
```

Arguments

object	Object of class fitctvaridmx.
iota	Logical. If iota = TRUE, include estimates of the iota vector, if available. If iota = FALSE, exclude estimates of the iota vector.
sigma	Logical. If sigma = TRUE, include estimates of the sigma matrix, if available. If sigma = FALSE, exclude estimates of the sigma matrix.
theta	Logical. If theta = TRUE, include estimates of the theta matrix, if available. If theta = FALSE, exclude estimates of the theta matrix.
...	additional arguments.

Value

Returns a list of vectors of parameter estimates.

Author(s)

Ivan Jacob Agaloos Pesigan

coef.fitctvarmx	Parameter Estimates
-----------------	---------------------

Description

Parameter Estimates

Usage

```
## S3 method for class 'fitctvarmx'  
coef(object, iota = FALSE, sigma = FALSE, theta = FALSE, ...)
```

Arguments

object	Object of class fitctvarmx.
iota	Logical. If iota = TRUE, include estimates of the iota vector, if available. If iota = FALSE, exclude estimates of the iota vector.
sigma	Logical. If sigma = TRUE, include estimates of the sigma matrix, if available. If sigma = FALSE, exclude estimates of the sigma matrix.
theta	Logical. If theta = TRUE, include estimates of the theta matrix, if available. If theta = FALSE, exclude estimates of the theta matrix.
...	additional arguments.

Value

Returns a vector of parameter estimates.

FitCTVARIDMx	<i>Fit the First Order Continuous-Time Vector Autoregressive Model by ID</i>
--------------	--

Description

Fit the First Order Continuous-Time Vector Autoregressive Model by ID

Usage

```
FitCTVARIDMx(
  data,
  observed,
  id,
  time,
  iota_fixed = TRUE,
  iota_start = NULL,
  iota_lbound = NULL,
  iota_ubound = NULL,
  phi_start = NULL,
  phi_lbound = NULL,
  phi_ubound = NULL,
  sigma_diag = TRUE,
  sigma_start = NULL,
  sigma_lbound = NULL,
  sigma_ubound = NULL,
  theta_fixed = TRUE,
  theta_start = NULL,
```

```

theta_lbound = NULL,
theta_ubound = NULL,
mu0_fixed = TRUE,
mu0_start = NULL,
mu0_lbound = NULL,
mu0_ubound = NULL,
sigma0_fixed = TRUE,
sigma0_diag = TRUE,
sigma0_start = NULL,
sigma0_lbound = NULL,
sigma0_ubound = NULL,
try = 1000,
ncores = NULL
)

```

Arguments

data	Data frame. A data frame object of data for potentially multiple subjects that contain a column of subject ID numbers (i.e., an ID variable), and at least one column of observed values.
observed	Character vector. A vector of character strings of the names of the observed variables in the data.
id	Character string. A character string of the name of the ID variable in the data.
time	Character string. A character string of the name of the TIME variable in the data.
iota_fixed	Logical. If <code>iota_fixed = TRUE</code> , the dynamic model intercept vector <code>iota</code> is fixed at zero. If <code>iota_fixed = FALSE</code> , the dynamic model intercept vector <code>iota</code> is estimated.
iota_start	Optional starting values for <code>iota</code> . If <code>iota_fixed = TRUE</code> , <code>iota_start</code> will be used as fixed values. If <code>iota_fixed = FALSE</code> , <code>iota_start</code> will be used as starting values.
iota_lbound	Optional lower bound for <code>iota</code> . Ignored if <code>iota_fixed = TRUE</code> .
iota_ubound	Optional upper bound for <code>iota</code> . Ignored if <code>iota_fixed = TRUE</code> .
phi_start	Numeric matrix. Optional starting values for <code>phi</code> .
phi_lbound	Numeric matrix. Optional lower bound for <code>phi</code> .
phi_ubound	Numeric matrix. Optional upper bound for <code>phi</code> .
sigma_diag	Logical. If <code>sigma_diag = TRUE</code> , <code>sigma</code> is a diagonal matrix.
sigma_start	Numeric matrix. Optional starting values for <code>sigma</code> .
sigma_lbound	Numeric matrix. Optional lower bound for <code>sigma</code> .
sigma_ubound	Optional upper bound for <code>sigma</code> .
theta_fixed	Logical. If <code>theta_fixed = TRUE</code> , the measurement error matrix <code>theta</code> is fixed to zero. If <code>theta_fixed = FALSE</code> , estimate the diagonal measurement error matrix <code>theta</code> .
theta_start	Optional starting values for <code>theta</code> . Ignored if <code>theta_fixed = TRUE</code> .

theta_lbound	Optional lower bound for theta. Ignored if theta_fixed = TRUE.
theta_ubound	Optional upper bound for theta. Ignored if theta_fixed = TRUE.
mu0_fixed	Logical. If mu0_fixed = TRUE, initial mean vector mu0 is fixed. If mu0_fixed = FALSE, initial mean vector mu0 is estimated.
mu0_start	Optional starting values for mu0. If mu0_fixed = TRUE, mu0_start will be used as fixed values. If mu0_fixed = FALSE, mu0_start will be used as starting values.
mu0_lbound	Optional lower bound for mu0. Ignored if mu0_fixed = TRUE.
mu0_ubound	Optional upper bound for mu0. Ignored if mu0_fixed = TRUE.
sigma0_fixed	Logical. If sigma0_fixed = TRUE, initial mean vector sigma0 is fixed. If sigma0_fixed = FALSE, initial mean vector sigma0 is estimated.
sigma0_diag	Logical. If sigma0_diag = TRUE, sigma0 is a diagonal matrix.
sigma0_start	Optional starting values for sigma0. If sigma0_fixed = TRUE, sigma0_start will be used as fixed values. If sigma0_fixed = FALSE, sigma0_start will be used as starting values.
sigma0_lbound	Optional lower bound for sigma0. Ignored if sigma0_fixed = TRUE.
sigma0_ubound	Optional upper bound for sigma0. Ignored if sigma0_fixed = TRUE.
try	Positive integer. Number of extra optimization tries.
ncores	Positive integer. Number of cores to use.

<code>theta_lbound</code>	Optional lower bound for <code>theta</code> . Ignored if <code>theta_fixed = TRUE</code> .
<code>theta_ubound</code>	Optional upper bound for <code>theta</code> . Ignored if <code>theta_fixed = TRUE</code> .
<code>mu0_fixed</code>	Logical. If <code>mu0_fixed = TRUE</code> , initial mean vector <code>mu0</code> is fixed. If <code>mu0_fixed = FALSE</code> , initial mean vector <code>mu0</code> is estimated.
<code>mu0_start</code>	Optional starting values for <code>mu0</code> . If <code>mu0_fixed = TRUE</code> , <code>mu0_start</code> will be used as fixed values. If <code>mu0_fixed = FALSE</code> , <code>mu0_start</code> will be used as starting values.
<code>mu0_lbound</code>	Optional lower bound for <code>mu0</code> . Ignored if <code>mu0_fixed = TRUE</code> .
<code>mu0_ubound</code>	Optional upper bound for <code>mu0</code> . Ignored if <code>mu0_fixed = TRUE</code> .
<code>sigma0_fixed</code>	Logical. If <code>sigma0_fixed = TRUE</code> , initial mean vector <code>sigma0</code> is fixed. If <code>sigma0_fixed = FALSE</code> , initial mean vector <code>sigma0</code> is estimated.
<code>sigma0_diag</code>	Logical. If <code>sigma0_diag = TRUE</code> , <code>sigma0</code> is a diagonal matrix.
<code>sigma0_start</code>	Optional starting values for <code>sigma0</code> . If <code>sigma0_fixed = TRUE</code> , <code>sigma0_start</code> will be used as fixed values. If <code>sigma0_fixed = FALSE</code> , <code>sigma0_start</code> will be used as starting values.
<code>sigma0_lbound</code>	Optional lower bound for <code>sigma0</code> . Ignored if <code>sigma0_fixed = TRUE</code> .
<code>sigma0_ubound</code>	Optional upper bound for <code>sigma0</code> . Ignored if <code>sigma0_fixed = TRUE</code> .
<code>try</code>	Positive integer. Number of extra optimization tries.
<code>ncores</code>	Positive integer. Number of cores to use.

Value

Returns an object of class `fitctvarmx` which is a list with the following elements:

call Function call.

args List of function arguments.

fun Function used ("FitCTVARMx").

output A fitted OpenMx model.

vcov.fitctvaridmx	<i>Sampling Covariance Matrix of the Parameter Estimates</i>
-------------------	--

Description

Sampling Covariance Matrix of the Parameter Estimates

Usage

```
## S3 method for class 'fitctvaridmx'  
vcov(object, iota = FALSE, sigma = FALSE, theta = FALSE, ...)
```

Arguments

object	Object of class fitctvaridmx.
iota	Logical. If iota = TRUE, include estimates of the iota vector, if available. If iota = FALSE, exclude estimates of the iota vector.
sigma	Logical. If sigma = TRUE, include estimates of the sigma matrix, if available. If sigma = FALSE, exclude estimates of the sigma matrix.
theta	Logical. If theta = TRUE, include estimates of the theta matrix, if available. If theta = FALSE, exclude estimates of the theta matrix.
...	additional arguments.

Value

Returns a list of sampling variance-covariance matrices.

Author(s)

Ivan Jacob Agaloos Pesigan
